DETAILED ACTION

1. This office action is in response to the amendment of January 8, 2009.
2. The examiner acknowledges that the applicant as incorporated allowable subject matter into independent claim 10 and has amended claims 3, 4, 6, 8, 11, 12, 14, and 16 to depend from claim 10.
3. The examiner notes that claims 1, 2, 7, 9, 13, 15, and 17-20 have been canceled.
4. The instant application is in condition for allowance and the amendments to the claims will be entered.

EXAMINER'S AMENDMENT

5. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

The application has been amended as follows:

- a. Claim 1
 - i. Recites the limitation of "the interior space though and inlet" and will be amended to be --- the interior space through and inlet ---
 - ii. The claim contains the minor grammatical error of "the housing,; and" and will be corrected to be --- the housing; and ---
- b. Claim 8
 - i. Recites the limitation of "wherein the plate is positioned within the outlet end." There is no antecedent basis for the element of an "outlet

Art Unit: 3746

end" and if properly introduced to be "wherein the plate is positioned within an outlet end" one of ordinary skill in the art would not be able to ascertain if the "outlet end" referred to a rod, a pump chamber, or an outlet chamber. The examiner notes that a limitation directed toward "an outlet end of the outlet chamber" would not be commensurate in scope with the embodiments of the instant invention that amended claim 10 is generic to. Specifically this limitation would be directed toward the embodiment of figure 5. The embodiment of figure 5 does not include the specific structural components for a plate at the end of a rod that are generic to the embodiments of figures 2 and 3 to which the limitations of claim 10 are directed to. The examiner notes that claim 8 depends from claim 10 and claim 10 properly introduces the element of an "inner end" of and "outlet chamber." The examiner further notes that if the rod 6 of the instant invention were extended so that plate 31 (of fig. 2) or plate 41 (of fig. 3) were in mating relationship with their respective outlet chambers, a portion of each plate, as defined by elements 33 and 42 respectively, would be disposed within an inner end, elements 30 and 40 respectively, of an outlet chamber. Therefore the limitation of:

- "wherein the plate is positioned within the outlet end"

will be amended to be:

- --- wherein the plate is positioned within the inner end of the outlet chamber ---

Allowable Subject Matter

2. Claims 3, 4, 6, 8, 10-12, 14, and 16 are allowed.
3. The following is an examiner's statement of reasons for allowance: the prior art fails to teach the limitations of a vibratory pump comprising a rigid pumping chamber with a rod extending there through, the rod operably connected to a vibration mechanism on one end and a plate which mates with an outlet chamber within a pumping chamber on an opposite end, and an inlet to a pump chamber extends out of a pump chamber to be inserted into a fluid in a combination wherein the plate has a central portion with a first diameter and outer portion with a second diameter larger than the first diameter, the outlet chamber has an inner and outer end, the inner end being within the pumping chamber and having a central opening that has a larger diameter than a first diameter portion of the plate and is sealingly engaged with a sealing member of an outer portion of the plate that is at the end of the rod opposite to the vibrating mechanism.
4. The prior art of record includes Lishanski et al. US 6,428,289 and Nottingham et al. US 5,716,007. Lishanski teaches the general subject matter of a vibratory pump with a rod extending through a pump chamber having a plate on one end that engages a central opening within an outlet chamber that is disposed within a pumping chamber. Nottingham teaches a fluid dispenser with a rod having a plate on one end (and a diaphragm) that reciprocates up and down to draw fluid into a pump chamber through a fluid inlet that extends out from a pump chamber into the fluid that is to be pumped. Lishanski is the closest prior art and fails to teach the fluid inlet extending out of a pump

Art Unit: 3746

chamber that is taught by Nottingham. A combination of the two references would not teach the specific details of a vibratory pump with fluid inlet extending from a pump chamber into a fluid to be pumped, a rod connected to a vibrating mechanism on one end, and a plate at the end of the rod that includes a central portion with a diameter that is less than an outer portion which has a sealing member that engages an inner end of an outlet chamber disposed within a pump chamber. The specific structural details of the plate member in combination with aspects of the invention that were known in the art, forms the basis for the determination of novelty and allowance of the instant application.

5. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
